ALWAYS COOLER

BOX & TAPS

OUR RANGE OF UNDERCOUNTER SOLUTIONS AND TAPS: ENDLESS POSSIBILITIES OF COMBINATION

This is the most favored solution among designers because the cooler can be hidden under the counter or in other spaces, optimizing both the space and style of the surroundings, leaving only the dispensing point visible.

At home and in the office, in bars, restaurants, and... everywhere! Blupura BOX models can be connected with either taps or advanced dispensing heads, thus making them the perfect solution for those seeking high performance and advanced functionality in a compact solution, yet preferring to "hide" the core of the dispenser for space or style reasons. Now also available in the Osmo version of the Blusoda Box 30 Fizz model for even purer water, thanks to RO membranes.

It is there but not seen. Choosing a BOX solution not only offers space advantages but also the option to choose the most suitable tap for every context.

Blusoda BOX and Rebel BOX models include a conveyor for warm air expulsion through a single opening, enabling optimal heat dissipation and space optimization. In the Box 60 model, the conveyor is available as an optional extra.

Choosing to connect a BOX undercounter cooler to the tap is the ideal solution when space is limited. The Blupura BOX & TAPS range is so extensive that it satisfies every need, both in terms of performance and style.

The choice of a BOX cooler can also be driven by water distribution needs in specific installations. In addition to being used individually, many Blupura taps can be connected in series to a single centralized unit and provide the water you need at different dispensing points, even on different floors of the same building.

EVERY POWER FOR EVERY NEED: ALL BLUPURA UNDERCOUNTER SOLUTIONS

Blupura BOX models feature different technologies and performance, and they are designed to offer continuous dispensing capacity for every type of water (still and sparkling, at room temperature, cold, and hot).

Impeccably built in stainless steel to operate "behind the scenes" Blupura BOX coolers discreetly and functionally fit inside any kitchen cabinet, in the furnishings of office break areas, in hotel technical rooms, on bar counters, in restaurants, and in canteens. The Fizz undercounter versions are equipped with the best stainless steel professional carbonators. In models with high cooling capacities, the recirculation pump can be used to optimize multiple installations even at a distance.
